

## WITH AI INTEGRATION

## NX CAMERA HEALTH

### Health Reporting

Choose a custom Health Zone for each camera

### Offline Monitoring

Signal when a camera stays offline beyond the grace period

### Camera Clean

Daily AI check for dirt, cobwebs, moisture, or lens obstruction

### Placement Check

Daily AI comparison that alerts if a camera has moved or been blocked

### Recording Retention Off

Alert when system falls below expected archive retention

### System-wide Health Checks Off

Monitoring checks across the linked NX system

## Triggered by Camera Analytics

Create smart monitoring rules using camera analytics. Convert analytics events into actionable alarms on Virtual Zones.

## Triggered by an Alarm Event

Grab footage from alarm signals. Link alarm zones to cameras. All standard alarm formats supported - such as CID, IRFast, SIA, ArmourIP etc. Automatically retrieve and deliver video associated with alarm events for rapid verification.

Intruder Events, Access Control Events, Plant Alarms, Fire Alarms etc.

## WITHOUT AI INTEGRATION

- Use camera analytics (line crossing, intrusion, motion, object, etc).
- Create virtual zones + schedules; analytics become alarm zones.
- **Outcome:** Sends alarm if required to monitoring station + Monitoring Pro app.
- **Requirements:** Supported VMS with internet connection or port forwarding.

- Link alarm zones to cameras for automated video delivery.
- Works with any alarm (intruder, panic, plant, door).
- **Setup:** Choose camera(s) + zone(s).
- **Outcome:** Sends alarm to monitoring station + Monitoring Pro app.
- **Requirements:** Monitored Alarm System with Supported VMS with internet connection.

## AI SCHEDULED CAMERA CHECKS

- Utilize virtual guards with AI driven checks.
- Schedule snapshots or videos and use AI analysis to proactively identify and respond to potential issues.
